3 Manual

This manual describes all the functions of the WWW-browser.

3.1 Symbols and Conventions

Buttons and menus are written in **bold** face. *Italic* font is used for special windows of the WWW-browser. MP stands for the Apple Messagepad System.

3.2 Preface

The WWW-Client is a two-part software, consisting of a browser on the MP and the gateway to the internet on a workstation. The browser represents the user interface. It does all the interaction with the user, interprets HTML and sends requests to the gateway. The gateway performs the connection to the desired server, downloads the document, does some preprocessing and sends the result to the MP.

3.3 The browser

A screenshot of the browser is shown in Fig. 1. In the textwindow you can see a welcome message and a WWW-icon. Underlined words in this window are links to new documents on different servers. Tapping on underlined words activates the connection between browser and
